## Drivers' Visual Attention in Real and Simulated Environment

90 min(s) to complete

Cash

Experiment

Nottingham NG7 2AG, UK

University of Nottingham

The study involves comparing drivers' visual attention at junctions in a simulated environment and on real roads. Drivers' will have to participate in two sessions (on different days). One will be in the University of Nottingham's driving simulator, and the other will be driving a real on-road car around a route in Nottingham. Drivers' eye movements will be tracked continuously throughout both the drivers using lightweight glasses.
