

Call For Participants

Tinnitus and Auditory Perception Mechanisms

150 min(s) to complete

£30 and local travel expenses reimbursed

Experiment

Wellcome Trust Centre, 12 Queen Square, London WC1N 3AR, UK

University College London

Do you have tinnitus?

Take part to help us understand the neural mechanisms underlying the condition better. Chronic tinnitus is a constant ringing/tone/hissing that a person can hear despite it having no physical source.

Forming predictions based on prior experiences is a fundamental part of how we perceive the world. By presenting sequences of sounds and measuring brain responses via fMRI, we aim investigate how auditory perception differs between people
