

Call For Participants

Combined Antidepressant and Behavioural Intervention (CABIN) Study

3 week(s) to complete

£150 for completing the study, plus any earnings from compute tasks

Experiment

Oxford, UK

University of Oxford

The CABIN study is looking for volunteers low in mood and activity aged 18-65 years to participate in a new research initiative at the University of Oxford. The study involves taking a capsule every day for 14 days and might also include receiving three psychological training sessions focused on activity planning and scheduling. The capsules might contain a placebo (inactive substance) or a commonly used antidepressant medication called citalopram (also known as Cipramil).
