Loughborough University

There aren't many camera adaptations available on the market to help photographers with impairments. Most cameras are built for the right hand and right eye dominant users. So people need adaptations that can help them make their experience better.

The purpose of this study is to,

1. Find out the key areas in a scenario that exhibits a problem.
2. Know about user's interest in the types of photography, camera equipment and the coping strategies that help them with their
