Online Interview

Online

University of Central Lancashire

This study aims to improve the effectiveness of facial composites composed by witnesses to crimes. Composites are pictures of faces constructed from a person's memory, and are used by police to help solve crime.

You will be asked to identify composites of English football players as well as the photographs they have been constructed from. This will be conducted over Microsoft Teams via a laptop. The link to book a time slot will be provided. This will take approximately 15 minutes.
